

Amendments to the Specification:

Please delete the following paragraph prior to the paragraph that begins on page 2, line 1.

~~Graphical data is rendered by executing instructions from an application that is drawing data to a display. During image rendering, three dimensional data is processed into a two dimensional image suitable for display. The three dimensional image data represents attributes such as color, opacity, texture, depth, and perspective information. The draw commands from a program drawing to the display may include, for example, X and Y coordinates for the vertices of the primitive, as well as some attribute parameters for the primitive, and a drawing command. The execution of drawing commands to generate a display image is known as graphics processing.~~
